About Me

I'm a software engineer specializing in building scalable, user-centric applications and systems. Over the past 3 years, I've focused heavily on core tech stack around web, blockchain, infrastructure, and AI. I love bridging the gap between complex code logic and smooth real world experiences. I have experience in building production-grade solutions, implementing novel mechanisms, and conducting research. I also love to work with people on projects and help people get moving with their tech journey easily.
